

TRAVELLER VEHICLE GENERATOR

Features

Specialist applications need exceptional solutions, hence the development of HFL "Traveller" vehicle generators. The design criteria was to produce compact, super quiet generators capable of operating close to personnel without undue disturbance. The resulting range of generators sets new operational standards, both in quietness and most important, reliability. HFL vehicle generators are supplied in specially insulated GRP cocoons, featuring water-cooled exhaust expansion boxes effectively silencing the exhaust gases.

All HFL vehicle generators come complete with remote start panel and loom, a remote radiator with silent AC fan and exhaust components. Customers include leading Uplink (Satellite News Gathering) vehicle operators, Formula 1 racing teams, Exhibition Vehicle Contractors, Police, Medical and Broadcasters - all of whom have exacting demands on their suppliers.
